Monkeyshines

(Unlimited variations!)
(2 players) Press RESET next
press 0 on numerical keyboard

The game
You suddenly find yourself in a large
monkey cage with your partner.
When the game starts, the four
monkeys are swinging playfully
from the ceiling. They will soon
move through the entire cage
however, cleverly using the pattern
of monkey-bars. Every time you
press RESET and 0 (on the
numerical keyboard!) you will get a
different pattern of bars.

The monkeys are very friendly by
nature. They will not do you any
harm, as long as you don't bother
them. There's a problem however!
The object of the game is to tag as
many monkeys as often as you can.
Every time you do, you score a
point. The monkeys don't like that.
They even get mad and dangerous.
They turn red with anger and
become vicious, trying to catch you
or your partner. If they do succeed,
you've had it and you'll freeze
during the rest of the game.
The game is over when both players
have been caught by red monkeys.

Monkeys are inclined to forget
easily; they don't stay mad very
long and return to their normal self
as you will see. They will resume
playing harmlessly until they get
tagged again. To add a touch of
realism, the monkeys will stay mad
and red longer when they are being
tagged more often. It all makes
sense!

How to play
Both men are controlled by the
joysticks of the handsets. They may
move up into the cage by jumping
from one level to another. Only one
level at the time however, so be
careful. To make them jump, press
the action button. The direction in
which they jump is governed again
by the joystick. If they miss a
monkey-bar, they will drop to the
next lower level in a straight line,
without hurting themselves. You
may continue playing the moment
your man lands again.

You will find that the monkeys are
considerably more agile than your
man and it will not be easy to catch
them or to avoid them when they are
red-mad!

When you have succeeded in
catching a monkey, you tag him by
pressing your action button. The
moment you do, he turns red and
becomes dangerous. He will jump
away however in the direction
indicated by your joystick. Make
sure that he doesn't jump towards
your partner!

Score-keeping
In the left-hand bottom corner of the
screen, the computer will
automatically keep score for you,
adding one point every time you or
your partner tag a monkey.

Try and stay clear of the red
monkeys though!

Starting a new game
A new game will start automatically
when both players have been
caught by a red monkey.

The highest score in a series of
games is shown in red figures, just
above the regular, current score.

Playing alone
You can also play alone, of course.
Just ignore the other player and
start your confrontation with the
monkeys all by yourself!

Each time a game is finished,
press RESET (△), 'SELECT GAME'
is shown on the screen. Now:
    (a) Select another game.
Or (b) Select another Videopac.
        Remove existing Videopac
        by placing one hand next to
        it, and pulling handle
        upwards.
        Replace Videopac in its box.

Or (c) Plug aerial back into TV, and
        unplug the Videopac
        Computer from the mains.

Rotating monkey-bars

(1 or 2 players) Press RESET next press 0 on numerical keyboard

The game will start as described above. Press R (Rotation)

The monkey-bars will now rotate upward every few seconds. This adds a new dimension to the game, demanding a new strategy. You have to stay alert and react promptly to the ever changing pattern of bars!

You can stop the upward rotation of the monkey-bars by pressing "S" (Stop). When you press "R", they will start moving again.

Rules of this game exactly as with "Monkeyshines".

Shuteye

(1 or 2 players) Press RESET next press 0 on numerical keyboard next press I (for Invisible)

Now you are playing the same game again with the added handicap that the monkey-bar pattern has become invisible. It doesn't seem to bother the monkeys too much however!

You can make the monkey-bars visible again by pressing "V" (for Visible).
Press "I" again and the bars become invisible again.

Monkey chess

(3 players) Press RESET next press 0 on numerical keyboard

This game is basically the same as "Monkeyshines". The third player makes the important difference. He can alter the pattern of monkey-bars and thus try and outwit the Great Monkey. He can remove or add bars at will.

How to add or remove monkey-bars

On the left-hand side you see the letters: M-O-N-K-E-Y.
Across the bottom you see the numbers 1 to 8.

See diagram for example.

You can repeat this as often as you want during the game, continually changing the pattern of monkey-bars. Your third man may build ladders for his two partners; he may try and isolate one or more monkeys, etc.

Bananas

(3 - highly skilled! - players) Press RESET next press 0 on numerical keyboard

You may now make any combination of the previous games: Rotating Monkey-bars, Shuteye and/or Monkey Chess.

Check procedure
If you suspect a fault in the equipment follow this procedure (with a Videopac installed). Press RESET (△). The TV will emit a short sound, and 'SELECT GAME' should appear on your TV screen. If not, ensure that the equipment is set up properly as detailed in the Instructions for Use (both of the equipment, and of the Videopac used). If the fault remains, take both the equipment and Videopac to your dealer.

Ask your dealer about the other Videopac cartridges that have been issued so far:
